Instruction Manual for Off Tool

Put the guide of an off tool onto the outer surface of a tubing. Insert the tubing into the fitting body until it reaches the end. Pull the tubing straight out from the fitting while pressing the release sleeve with the off tool.

⚠ Caution: If you do not insert the tubing sufficiently and do not press the release sleeve completely, pulling out or twisting the tubing may cause permanent damage to the tubing.

⚠ Caution: Before you pull out tubing, make the inside pressure zero.
