

HEATING PRESS NPS-2005R OPERATOR'S MANUAL

Thoroughly read this operator's manual before operating the press.
To use endless splicing tools safely, be sure to hand this manual to the operator or worker.

1. Safety Precautions

We would like to thank you for having purchased our Integral Heating and Cooling Press NPS-2005R.

Thoroughly read this manual, especially the chapter on Safety Precautions, to use this machine safely.

This indicates a hazardous situation which, if improperly handled, will result in death or serious injury.

This indicates a potentially hazardous situation which, if improperly handled, will result in minor injury or property damage.

WARNING

Do not use this machine for any use other than belt endless splicing. Any use not intended for the prescribed purpose may invite an unexpected accident.

Improper use may render ineffective the safety protection features of the product.

This machine is not intended for use by the physically, sensory or mentally handicapped. They must have the supervision of a person responsible for their safety, if they use this machine.

Failure to do this may cause fire, electric shock or injury.

Do not allow children to handle this machine. Keep this machine out of reach of children.

Children should not play with this machine.

Failure to do this may cause fire, electric shock or injury.

A person with technical knowledge and skills should always operate, maintain and inspect this machine.

Handling by a person not having technical knowledge may cause fire, electric shock or injury.

Strictly avoid disassembling or remodeling this machine.

Disassembling or remodeling this machine may cause fire or electric shock. When repair or check is required, please contact your local distributor, agent in your area or our company.

In the event of trouble (smoke, fire or nasty smell, etc.), please immediately disconnect the power plug and contact your local distributor, agent in you area or our company for inspection or repair. Failure to do this may cause fire or electric shock.

When not using or carrying this machine, be sure to set the hook and turn the rotary handle until it slips to securely clamp the heat plate. Failure to do this may cause injury.

Confirm that the power supply to be used is within the designated of specification for this machine.

Failure to do this may cause fire or electric shock.

Model	Power supply		
NPS-2005R-1	100 - 120V 50 / 60Hz		
NPS-2005R-2	200 - 240V 50 / 60Hz		

Avoid using the press in the following environment.

Failure to do this may cause fire or electric shock.

- In an atmosphere of inflammable or ignitable gas
- · In an atmosphere of corrosive gas
- In ambient temperature of 5°C or below
- In ambient temperature of 40°C or above
- In an atmosphere of high humidity (environment where humidity exceeds 85%)
- In an environment subject to wet conditions from steam, water droplets or dew condensation, etc.

Be sure to wear heat-resistant gloves when operating this press.

Failure to do this may cause burns.

When operating this press, avoid touching the heat plate area even if wearing heat-resistant gloves.

Failure to do this may cause burns, even if wearing heat-resistant gloves, since press heat plates get heated to the press's preset temperature once the press is plugged in.

Avoid operating the press at the place close to combustible material. Failure to do this may cause fire.

Always use the pre-setter designed for this product.

Failure to do this may cause fire or electric shock.

Use of a pre-setter made for other products or by another manufacturer may render ineffective the safety protection features of the product.

Use a dry cloth for cleaning this machine. Strictly avoid using alcohol, benzene, thinner or other inflammable solvents.

Using inflammable solvents may cause fire.

Impressed voltage is directly applied to the power cable. Observe the following precautions not to damage the cable.

Failure to do this may cause fire or electric shock.

- Disconnect the power plug by hand.
- · Avoid pulling the cable to disconnect the power plug.
- Avoid modifying the power plug or replacing the plug with one from another manufacturer.
- Avoid placing anything on the power cable.
- · Avoid bending the power cable.
- Take care to prevent the power cable from touching the heat plate of the press.

Connect the power plug to the socket correctly.

Failure to do this may cause electric shock.

The power cable of this machine uses a grounded connection plug. Connect the power plug correctly into a grounded connection socket.

Use a conversion plug when the plug shape does not match the socket.

Failure to do this may cause electric shock.

The plug shape of the attached power cable is as follows. The conversion plug is not attached. When a conversion plug is necessary, users must provide their own.

Model	Plug type	Plug illustration
NPS-2005R-1	А Туре	
NPS-2005R-2	CEE7 (S Type)	(°)

Never handle this machine or the plug, cable, etc. with wet hands. Failure to do this may cause electric shock.

Never use this machine if it is wet.

Failure to do this may cause electric shock or fire.

CAUTION

Exercise care not to pinch your hands between the top cover and control box or the upper and lower heat plates.

Failure to do this may cause injury.

Avoid inserting your hands into the opening on the front face of the press.

Failure to do this may cause burns.

Avoid using this machine outdoors.

This product is not intended for the use outdoors.

Avoid dropping this machine or giving it a strong jolt.

Failure to do this may cause fire or electric shock.

Take measures to prevent this machine from dropping or falling, and do not install or operate the press in an unstable location.

Failure to do this may cause injury, fire or electric shock.

Carry out the inspection described on page 18 of this manual before operating this machine.

Failure to do this may cause fire or electric shock.

Do not use this machine for the endless splicing of belt of other manufacturers.

Splice defects may occur if this machine is used for endless splicing of belts from other manufacturers.

This may reduce the function and performance of the belt, or render it unusable.

2. Confirmation of Product

Before operating the press, check that the product is exactly what you have ordered. Using this product other than those specified in this manual may cause fire, electric shock, injury or burn.

2-1) Confirmation of Product

On opening the package, confirm the following points.

- 1) Are descriptions on the nameplate the same as those of item ordered? Confirm the model and power supply specification.
- 2) Is there any breakage or anything missing? The package contains this manual, the press and power cable.
- 3) Have screws and nuts loosened during shipping?

We double-check all items during inspection and shipment of products. In the event of any defect or failure, please contact your local distributor, agent in your area or our company.

2-2) Confirmation of the nameplate

MODEL: Press model

INPUT: Input power supply specification and power consumption

S/N: Serial number

2-3) Press model

There are two kinds of models with a different input power supply. The specification of the power supply is described by the input.

2-4) Notes for inquiry

When making inquiries, Please contact us with both the press model and serial number.

3. Specifications

3-1) Outline of the press

(1) The NPS-2005 press is specially designed for the joining of NITTA's CFTG belts using 200mm long "fingers."

(2) This machine is applicable with the following belt endless splicing specifications.

Joint specification: Finger shape: 200 mm long × 10 mm pitch

Maximum belt width: 60 mm or less
Maximum belt thickness: 6 mm or less

(3) Finger-endless splicing requires the finger puncher and pre-setter* of another-sales.

The pre-setter is required for each width belt that is to be made endless-spliced.

3-2) Main specifications of the Press

Model NPS-2005R-1		NPS-2005R-2		
	100 - 120V	200 - 240V		
Input power supply	50 / 60Hz	50 / 60Hz		
	578 – 833W	578 – 833W		
Fuse	φ5.2 × 20mm F 0A, 250V*			
Preset temperature	175°C			
Outer dimensions	With the press closed: 301 mm wide × 300 mm long × 180 mm high			
Outer dimensions	With the press opened: 301 mm wide × 435 mm long × 266 mm high			
Weight	9.5 kg			

^{*} When replacing the fuse, use the type listed in the specification shown above.

4. Operating Environment

Ambient temperature	5 – 40°C (no dew condensation)
Ambient humidity	15 – 85%R.H.
Working place	Indoor (place without dust and water)
Atmosphere	No inflammable, combustible or corrosive gas and steam

Avoid using this machine in the following environment.

Failure to do this may cause fire or electric shock.

- In the environment of inflammable or combustible gas
- In the environment of corrosive gas
- In the ambient temperature of 5°C or below
- In the ambient temperature of 40°C or above
- In the environment of high humidity (humidity exceeds 85%)
- In the environment of wetting by steam, water drop or dew condensation, etc.

5. Storage Environment

Ambient temperature	5 - 40°C (no dew condensation)
Ambient humidity	15 - 85%R.H.
Working place	Indoor (place without dust and water)
Atmosphere	No inflammable, combustible or corrosive gas and steam

When not in use, store this machine under the above conditions. WARNING Poor storage conditions may cause mechanical disorders in the machine and may result in electric shock or fire.

When not using or carrying the machine, be sure to set the hook and turn the rotary handle until it slips. Insufficient clamping may cause injury.

Before operating the machine, be sure to conduct the prior-to-use inspection and confirm the normal performance.

In the event any abnormality is found in the prior-to-use check, please immediately contact your local distributor, agent in your area or our company.

6. Name of each Part

6-1) Left side view of the press

6-3) Temperature controller

7. Equipment

These tools are necessary for correctly following the press procedures.

- NPS-2005R Press
- PS-200 Pre-Setting Mold
- One Pair of Sharp Scissors
- Mold Release Agent

8. Operating Procedure

WARNING Be sure to connect to a grounded outlet.

8-1) Pre-heating

Before preparing the belt ends, close the press and plug in the cord to begin pre-heating. The temperature control unit will run a diagnostic check for 6 seconds before heating.

A temperature of 175°C is recommended for joining LVR-60 material and has already been programmed into the controller. The upper readout on the unit indicates the current temperature. The lower readout indicates the programmed temperature of the bottom heating plate. This press takes approximately 10 to 15 minutes to pre-heat properly.

8-2) Preparation of fingers Cut 5 to 10mm off the tips of each finger using a pair of scissors. This will help when matching the belt ends in the pre-set mold. (if the bottom fabric layer sticks out of the top surface it may lead to

cracking or peeling failure.)

Please ensure that only the very tips of the fingers are removed. CAUTION Material will flow into any cavities to provide a smooth splice. Too much flow will weaken the bond, however. If this occurs, small bubbles will be seen between the fingers.

8-3) Securing fingers

Loosen clamps on lower mold of pre-setter and slide finger-prepared ends in fabric side down. Push ends together at center of mold (between marks on mold). Use a thin metal edge (such as steel ruler or screwdri to push tips of fingers or aramid fibers back between fingers if needed. Fasten clamps to hold belt in place.

If the tip of a finger or aramid fibers stick out from the surface, push them back between the fingers using a thin plate (steel measuring scale, screwdriver, etc.). Secure the belt with clamps on each end of the mold, cover belt material with fabric and replace top guide plate.

Cover top of belt material with 1mm thick silicone mat, making sure the mat faces matte side down.

8-4) Mold positioning

After the actual temperature reaches the programmed value, open the press and insert the mold with belt. The mold must be properly placed between the metal position guides, and marks on the mold should be located within the heating plates to heat the entire finger area properly. Fasten hook and turn pressure knob clockwise until it slips.

8-5) Start heating cycle

Simply push the start button on the press to initiate a cycle. Make sure the green pilot lamp above the yellow start button is turned on.

Be sure to wear heat-resistant gloves when operating the press.

WARNING Failure to do this may cause burn.

8-6) Heating and cooling

After maintaining the programmed temperature for 10 minutes, the heat shuts off and cooling fans start automatically.

The operator should not leave the machine unattended while in use. Take measures to prevent other people from touching the machine accidentally. Failure to do this may cause burns to others.

Do not touch or open the press until the current temperature is below CAUTION 80°C. This takes about 15 minutes. Disconnecting the electricity will then stop the cooling fans.

8-7) Discontinuing operation of the machine while in use Disconnect the plug if it becomes necessary to discontinue operation of the machine while it is in use.

Even if the plug is disconnected during operation, preset data of preset temperature and hold time are maintained.

When operation is discontinued during use, the machine is kept at high temperature. Be sure to wear heat-resistant gloves when handling the machine. Failure to do this may cause burns.

The operator should take measures to prevent other people from touching the machine accidentally, until the machine temperature lowers to near room temperature (about two hours).

Failure to do this may cause burns to others.

If machine operation is discontinued during the process of splicing a CAUTION belt, do not use the belt.

The splice may become defective, reducing the function and performance of the belt, or rendering it unusable.

8-8) Remove mold

Turn the knob counterclockwise, release the clamp and open the press.

8-9) Finishing

Remove the belt from mold and inspect the condition of the joint. There must not be any large bubbles on the surface, cord filaments sticking out, cracks or grooves between the fingers. After the visual inspection, trim any polyurethane material from the edges using scissors.

9. Parts List

10. Troubleshooting

Problem	Cause		Solution		
	The power plug has been disconnected.		Connect the power plug.		
	The fuse has blown out.		Replace the fuse.		
No display on the temperature controller	Is power supplied to the outlet?		Failure of the temperature controller or disconnection of power cable or internal wiring is suspected. * Please contact your local distributor, agent in your area or our company.		
			Supply power to the outlet.		
The temperature	Defective data on temperature controller		Disconnect the power plug once and connect it again.		
controller gives a display starting with AL. (AL01 - AL99)			* If the alarm display does not disappear, failure on the temperature controller is suspected.		
(7.207 7.200)			* Please contact your local distributor, agent in your area or our company.		
	Setting change is not possible for 6 sec. right after power ON.		Wait 6 sec. or more to make a setting.		
Temperature and hold	The <u>para</u> and other buttons were pushed right after the preset value was changed.		To fix the preset value, avoid pushing buttons for 2 sec. or more.		
time cannot be set.	Other than the above: Failure of the temperature controller		If setting is not possible even by the above methods, failure on the temperature controller is suspected.		
			* Please contact your local distributor, agent in your area or our company.		
	Does power supply not match the specification?		Use the correct power supply.		
Cannot be heated to the set temperature.			Failure of the temperature controller or disconnection of internal wiring is suspected.		
			* Please contact your local distributor, agent in your area or our company.		
The cooling fan does	Has proset temperature		This machine has been set to end cooling at 45 °C. Setting the temperature to around 45 °C may cause the cooling fan to operate incorrectly.		
not operate.	Has preset temperature been set to around 45 °C?		Set the preset temperature higher.		
·		No	Failure of the cooling fan or disconnection of internal wiring is suspected.		
	I I		* Please contact your local distributor, agent in your area or our company.		
The rotary handle slips and cannot be loosened.	The rotary handle was turned excessively.		Lightly tap the handle from the rear to the front with a plastic hammer while taking care not to give the press any strong jolts. * Throttling force is sufficient when the rotary handle begins to slip.		

11. Inspection

Check item	Date/check	Date/check	Date/check	Date/check	Date/check
The power cable has no flaws.					
The temperature controller is not damaged.
